## DETAILED ACTION

### *Specification*

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 250 words. It is important that the abstract not exceed 250 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Helms, US

Patent No. 5,760,760.

Art Unit: 2871

The above claims are clearly anticipated by Helms's figures 1-2 and accompanying abstract which discloses a method and apparatus for automatically adjusting the brightness level of a liquid crystal display device based on the intensity of the light incident (e.g., the ambient light) of Applicant's claim invention, as so claimed in claims 1-25.

### *Conclusion*

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Schwarzschild (US 4,289,383) discloses a dot matrix display having a photo sensor for controlling illuminating system.

Ichise (US 5,786,801) discloses a back light control apparatus having a sensor.

Koenck et al. (US 5,818,553) disclose a contrast controller for a liquid crystal display by two photo-sensor which is disposed in front and back of the liquid crystal display.

Ando et al. (US 6,184,946) disclose a liquid crystal display having a two dimensional sensor to control the brightness of each pixel of a liquid crystal panel.
